

Wi-Fi Setup Via Mobile Phone or Tablet

1. Download "AWS IoT 1-Click" App

Go to the Google Play or Apple App Store and download the "AWS IoT 1-Click" app.

2. Navigate to the Wi-Fi Setup Screen

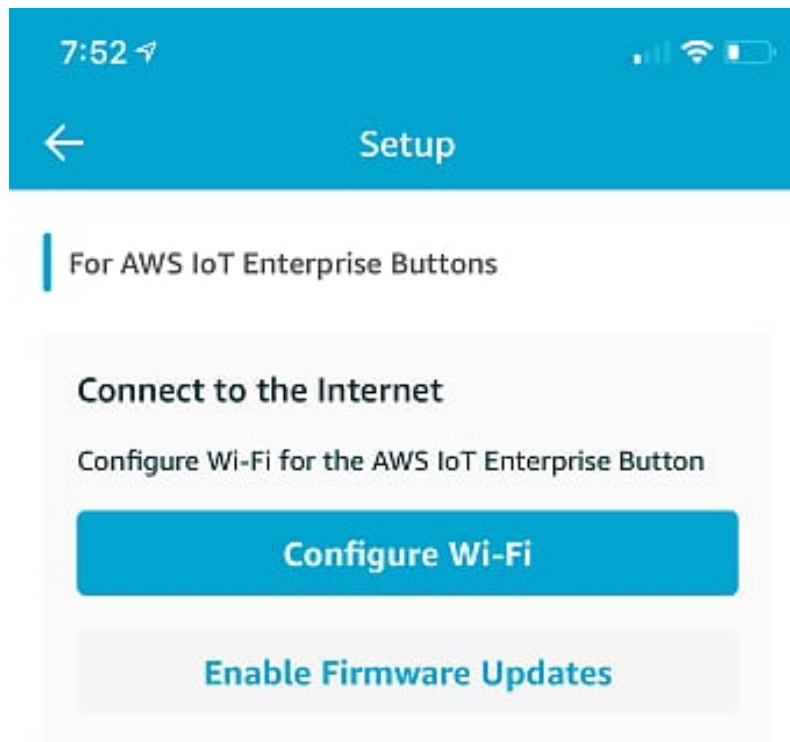

Once the app is downloaded, open the app. The first screen you see should look like this:

Do Not Press "Log in with AWS Account." Instead, look for the circular Wi-Fi only icon in the upper right portion of the app and press it.

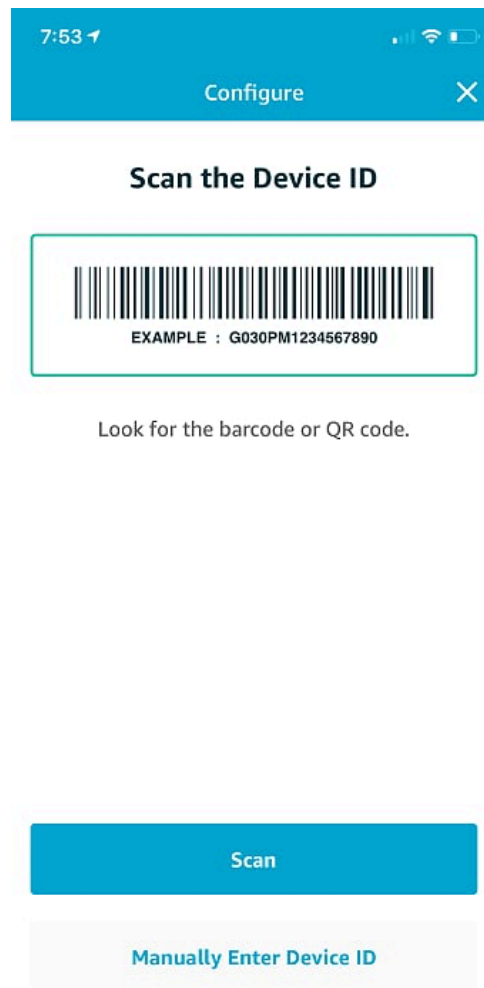

On the next screen, select the option to "Configure Wi-Fi."

3. Enter Your DSN (Device Serial Number)

You will be prompted to either scan your mytaptrack DSN (a bar code is located on the box in which your device was packaged) - or - manually enter the DSN (the alphanumeric code is located on the back of your mytaptrack device under the blue transparent section).

This step can be completed for multiple mytaptrack devices to make configuring your Wi-Fi as easy as possible. If scanning, click "Stop" after the number of devices you are configuring is shown in the app.

4. Complete Wi-Fi Configuration

After scanning or entering the DSN, click "Configure." You will be prompted to hold down the button on your mytaptrack device(s) for 6 seconds to complete the Wi-Fi connection process.
